Bare Rental Process

Step 1: Preparing Your Quotation

Your Mountain Crane representative consults with you regarding equipment requirements and project location to determine your minimum & expected rental duration. Our estimators will review our fleet (crawlers, rough terrains, conventional truck cranes, carry decks, and forklifts) and will help you determine the right crane for your project. Next, based on your project schedule, a real-time quotation with specific asset allocation is prepared.

Step 2: Placing Your Order

With your Mountain Crane representative, you review the project details including jobsite contacts, shipping instructions, and any special conditions. Your equipment specifications are finalized and your order is entered.

Step 3: Mountain Crane Documents Sent

Mountain Crane furnishes Equipment Rental Agreement and Insurance Requirements for completion. Documents are sent to you electronically or hard copy (if requested).

Step 4: Receipt of Mountain Crane Documents & Equipment Reservation

When Mountain Crane receives the signed Equipment Rental Agreement, Certificate of Insurance, and Purchase Order (if applicable), your order is confirmed and the equipment is now RESERVED.

Step 5: Equipment Preparation

Mountain Crane operations team prepares the equipment including boom/jib or attachment configuration in accordance with your order. All equipment is prepared in compliance with the OEM specifications and ASME B30.5.

Step 6: Equipment Shipping

While coordinating with your project site, the Mountain Crane Dispatch handles all truck reservations, scheduling, and permitting to ensure on time delivery.

Step 7: Machine Assembly & Inbound Inspection

Mountain Crane will dispatch a qualified erector or technician to the project site, in order to assist your crew in the proper assembly, maintenance, and operation of the equipment. After assembly, the on rent report is reviewed & completed with your on-site representative. You will receive a copy of this inspection.

Step 8: Rental End Notice

As your minimum rental period nears, and if you determine you will require the equipment beyond the expected rental period, please contact your Mountain Crane representative to arrange an extension. Please provide us with the written 15 day notification.

Step 9: Equipment Return

Mountain Crane Dispatch handles all trucking reservations, scheduling, and permitting to ensure coordinated pick-up of equipment. An Mountain Crane representative is on hand to assist your crew with disassembly and load out, as well as perform an Off-Rent Inspection of equipment for completion and review with your onsite representative.

Step 10: Rental Completion

When all equipment has been returned, the rental end date will be established and a review of the signed On Rent and Off Rent Inspection reports will determine the rental end billing.

Equipment Maintenance

Customers are responsible for all insurance and maintenance of bare rental equipment. If you prefer to have Mountain Crane Service perform this maintenance, your representative will arrange for a technician or third party to be on site.

All Services are performed per recommended Manufacturer Guidelines:

200-300 - Hour Service

1,000 - Hour Service

2,000 - Hour Service

An outline from the operator 's manual will be provided upon request

Note: Any damages to equipment (i.e., tires, glass, track wear, boom lacings, etc.) will be billed to customer.

Customers receive a \$50 credit towards monthly billing if they return weekly maintenance summaries to Bare Rental Manager in a timely manner.

Field Support

Mountain Crane employs a team of highly qualified factory trained service technicians. Our experienced and courteous technicians will diagnose and repair any technical problem that may arise. If you require the assistance of a Mountain Crane field service technician, please contact our Service department at (801) 282-3330.

Crane Maintenance

Mountain Crane cranes go through rigorous inbound and outbound inspections to ensure our customers receive work ready cranes that comply with ASME B30.5. Any required maintenance is performed by our expert Technicians.

Transportation

The Mountain Crane Operations team coordinates all movement of Mountain Crane equipment. Our experienced staff work with our customers to ensure that the equipment arrives on time. If you plan on transporting equipment between sites during the rental period, please let your representative know the new location & jobsite contact information. If you would like our assistance, please let us know.
